Logistics to Your
individual industries
globally

ENKEL

Our Vision

To be our Customers' leader within logistics & transport and be able to serve their every requirement and minimise related risks.

Our priority is agile, resilient and effective transport solution that will be a vital tool in every supply or purchase.

Metal & Construction

Here we serve for steel structures, construction machinery and equipment. Commodities within Metal & Construction as a rule require the best in price logistics & transport to minimise input into overall product value.

Our main commodity group within this industry is steel tanks & vessels for various use including water treatment, oil processing, food & beverage, etc. Enkel Grupp possesses an unsurpassed experience in handling such cargoes all over the Continent and overseas to Middle East and Far East. And yet we expand our portfolio by transporting new and new products within the industry: chimney sections, bridge sections, steel supports and much more.

Marine & Offshore

For companies within Marine & Offshore sector Enkel Grupp offers competitive supply chain and logistics solutions: transport of components for marine propulsion, ship's structure, deck machinery, offshore & subsea machinery and equipment.

Marine & Offshore trades are served globally but the main focus is Scandinavia, UK and Eastern Europe. Most of the commodities are of high-value and require exclusive planning and scheduling due to stricter supply terms and higher risks. For most of the projects we also assist in cargo survey, pre-shipment inspections, p & i as well as cargo insurance.

Oil & Gas

Oil & Gas sector is getting its popularity within Northern region as well as Middle East and Russia from year to year.

Enkel Grupp as a logistics & transport engineer supports "glocal" suppliers of various products including heat exchanging machinery & equipment, compression and power generation/transmission systems.

We design and arrange tailor made transports individually considering relevant optimum criteria set by our Customer.
